Dear Director Burcat,

STAFF REPORT ON BLUE WATER WIND

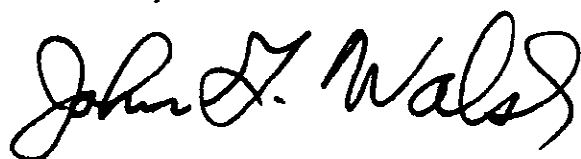

I have read about the staff report just issued by the PSC staff and agree that that it raises questions that Blue Water Wind must answer. I am dismayed, however at the speed with which those lawmakers who opposed wind generation from the beginning have declared the proposal for off-shore wind generation dead. Since these are the same people who gave Delmarva Power free rein a little while ago, I must confess that I am more than a little suspicious.

Needless to say, Delmarva Power's newfound great concern about the financial well being of its customers makes me downright nervous!

I ask you and the Commission to ask the proper questions of Blue Water Wind, but I also ask you and the Commission to consider all of the factors involved, among which are the stability of future costs (with wind turbines the fuel is free!), the benefits of an almost pollution free generation system both for the air and also for our inland waterways; when it is suggested that folks eat fish caught in our rivers & bays be eaten no more than once a week and swimming is discouraged we cannot continue as we have been.

When it is found that a toxic cloud exists for thousands of feet above the area of the present Indian River generation plant, PLEASE think of the future and do not let Delmarva lobbyists and apologists keep you from making decisions for the good of all citizens not just the well being of huge corporations.

Sincerely,

John G. Walsh
